

# PROJECT DESIGN PHASE

## 1. System Architecture

PocketSmart AI follows a simple system architecture where the user provides budget and expense details. The system processes the input, calculates the remaining balance, and provides a suitable budget recommendation.

Flow:

User → Input Screen → Python/Flask Processing → Budget Calculation → Recommendation → Output Screen

## 2. System Flowchart

Start

Enter User Name

Enter Monthly Budget

Enter Total Expenses

Calculate Remaining Balance

Generate Recommendation

Display Budget Summary and Recommendation

End

## 3. Data Flow Diagram (DFD)

The Data Flow Diagram represents how information moves through the PocketSmart AI system.

User

Enter Budget and Expense Details

PocketSmart AI System

Calculate Remaining Balance

Generate Recommendation

Display Result

## 4. Use Case Diagram

The User interacts with the PocketSmart AI system to perform the following activities:

1. Enter User Name
2. Enter Monthly Budget
3. Enter Total Expenses
4. View Budget Summary
5. View Remaining Balance
6. View Budget Recommendation

## 5. User Interface Design

PocketSmart AI contains the following basic screens:

1. Input Screen
2. User Name
3. Monthly Budget
4. Total Expenses
5. Budget Summary Screen
6. Monthly Budget
7. Total Expenses
8. Remaining Balance
9. Recommendation Screen
