

PROJECT PLANNING PHASE

1. Project Objective

The main objective of PocketSmart AI is to develop a simple and user-friendly budget management system that helps users manage their monthly budget and expenses and receive a basic spending recommendation.

2. Project Scope

- The project focuses on:
- Entering monthly budget details
- Entering total expenses
- Calculating the remaining balance
- Displaying a budget summary
- Providing a basic recommendation
- Presenting the results through a simple user interface

3. Project Activities

The main activities planned for the project are:

- Brainstorming and Ideation
- Requirement Analysis
- Project Design
- Project Planning
- Project Development
- Project Testing
- Project Documentation
- Project Demonstration

4. Resources Required

The following resources are required for developing the project:

Hardware:

- Computer/Laptop
- Keyboard and Mouse
- Internet Connection

Software:

- Python
- Flask

- HTML
- Visual Studio Code
- Web Browser

5. Project Schedule

Phase	Min Activity
Phase 1	Brainstroming and Ideation
Phase 2	Requirement Analysis
Phase 3	Project design and planning
Phase 4	Project development
Phase 5	Project testing
Phase 6	Project documentation
Phase 7	Project demonstration

6.Risk Planning

Possible project risks and their solutions are:

- Coding Errors – Check and correct the code during development.
- Calculation Errors – Test the budget calculation with different inputs.
- Interface Issues – Check the application interface before final submission.
- Time Delay – Complete each project phase according to the planned schedule.

7. Expected Outcome

The expected outcome of the project is a simple and functional budget management application that accepts user budget and expense details, calculates the remaining balance, and provides a basic budget recommendation.
