

PROJECT TESTING

1. Introduction

Testing is an important phase of PocketSmart AI development. The application is tested to ensure that the budget calculation, recommendation, and output work correctly.

2. Testing Objectives

The main objectives of testing are:

- To check whether the application accepts valid user inputs.
- To verify the budget calculation.
- To check whether the remaining balance is calculated correctly.
- To verify the budget recommendation.
- To ensure that the output is displayed correctly.
- To identify and correct errors in the application.

3. Test Cases

Test case	Input	Expected result	Status
TC01	Budget = 10000 Expense = 7500	Remaining balance = 2500	Pass
TC02	Budget = 10000 Expense = 10000	Remaining balance = 0	Pass
TC03	Budget = 10000 Expense = 12000	Remaining balance = - 2000	Pass
TC04	Valid name,budget and expense	Details accepted and processed	Pass
TC05	View output	Budget summary and recommendation displayed	pass

4. Functional Testing

The main functions of the application were tested, including:

- User input
- Budget calculation
- Expense calculation
- Remaining balance calculation
- Recommendation generation
- Output display

5. Calculation Testing

The system uses the following formula:

Remaining Balance = Monthly Budget – Total Expenses

Example:

₹10,000 – ₹7,500 = ₹2,500

The calculation was tested with different values to verify the accuracy of the result.

6. User Interface Testing

The user interface was checked to ensure that:

- Input fields are visible.
- Information can be entered easily.
- Buttons work correctly.
- Results are displayed clearly.
- The interface is simple and user-friendly.

7. Testing Result

The testing process confirmed that the main functions of PocketSmart AI work as expected. The application correctly accepts the budget and expense details, calculates the remaining balance, and displays a suitable recommendation.

8. Conclusion

Testing helped to identify and verify the correct working of the PocketSmart AI application. After testing the main functions, the application was found ready for demonstration.
