

PROJECT DEMONSTRATION

1. Introduction

PocketSmart AI – Your Smart Budget & Recommendation and Assistant is a simple budget management project developed to help users understand their monthly budget and expenses.

2. Demonstration Steps

Step 1: Start the Application

The user starts the PocketSmart AI application.

Step 2: Enter User Details

The user enters their name.

Step 3: Enter Monthly Budget

The user enters their monthly budget amount.

Step 4: Enter Total Expenses

The user enters the total amount spent during the month.

Step 5: View Budget Summary

The system calculates :

Monthly budget – Total expenses

Step 6: View Recommendation

The system provides a recommendation based on the remaining balance.

If the balance is positive, the user is within the budget.

If the balance is zero, the full budget has been used.

If the balance is negative, the user has exceeded the budget.

3. Sample Demonstration

Name: Madhina

Monthly Budget: ₹10,000

Total Expenses: ₹7,500

Remaining Balance: ₹2,500

Recommendation: You are within your budget. You can save ₹2,500.

PROJECT DEMONSTRATION

1. Introduction

PocketSmart AI – Your Smart Budget & Recommendation and Assistant is a simple budget management project developed to help users understand their monthly budget and expenses.

2. Demonstration Steps

Step 1: Start the Application

The user starts the PocketSmart AI application.

Step 2: Enter User Details

The user enters their name.

Step 3: Enter Monthly Budget

The user enters their monthly budget amount.

Step 4: Enter Total Expenses

The user enters the total amount spent during the month.

Step 5: View Budget Summary

The system calculates:

Remaining Balance = Monthly Budget – Total Expenses

Step 6: View Recommendation

The system provides a recommendation based on the remaining balance.

If the balance is positive, the user is within the budget.

If the balance is zero, the full budget has been used.

If the balance is negative, the user has exceeded the budget.

3. Sample Demonstration

Name: Asbiya

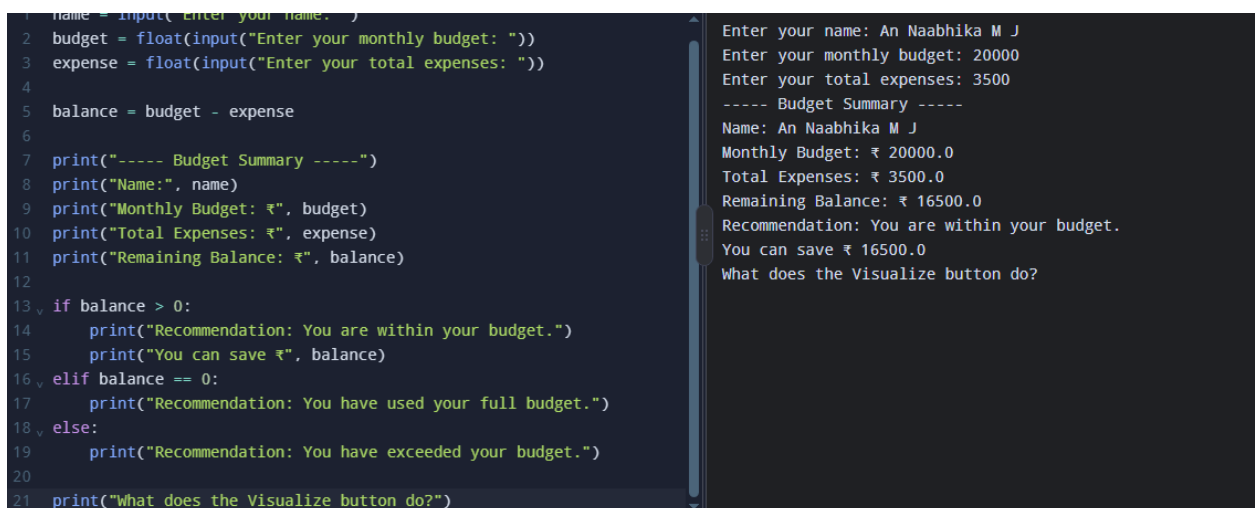

Monthly Budget: ₹10,000

Total Expenses: ₹7,500

Remaining Balance: ₹2,500

Recommendation: You are within your budget. You can save ₹2,500.

4. Screenshots

```
1 name = input("Enter your name: ")
2 budget = float(input("Enter your monthly budget: "))
3 expense = float(input("Enter your total expenses: "))
4
5 balance = budget - expense
6
7 print("----- Budget Summary -----")
8 print("Name:", name)
9 print("Monthly Budget: ₹", budget)
10 print("Total Expenses: ₹", expense)
11 print("Remaining Balance: ₹", balance)
12
13 if balance > 0:
14     print("Recommendation: You are within your budget.")
15     print("You can save ₹", balance)
16 elif balance == 0:
17     print("Recommendation: You have used your full budget.")
18 else:
19     print("Recommendation: You have exceeded your budget.")
20
21 print("What does the Visualize button do?")
```

Enter your name: An Naabhika M J
Enter your monthly budget: 20000
Enter your total expenses: 3500
----- Budget Summary -----
Name: An Naabhika M J
Monthly Budget: ₹ 20000.0
Total Expenses: ₹ 3500.0
Remaining Balance: ₹ 16500.0
Recommendation: You are within your budget.
You can save ₹ 16500.0
What does the Visualize button do?

5. Demo Video

A demonstration video of the PocketSmart AI project can be provided through a shareable video link.
